OST Lab – 6

Name – Vedant Shimpi

Reg ID – 241080068

Branch - IT

Aim - To contribute to an open source organization.

Theory

What is Open Source?

Open Source Software (OSS) is software whose source code is made publicly available so anyone can view, modify, and distribute it. Unlike proprietary software, open source emphasizes collaboration, transparency, and community-driven development.

Key Features of Open Source:

- Free to Use: Most OSS can be downloaded and used without cost.
- Transparency: Anyone can inspect the code to understand how it works.

- Collaboration: Developers worldwide can contribute to improving the software.
- Community Support: Users can seek help from communities, forums, and documentation.

Benefits of Open Source:

- Learning opportunity: See real-world code and improve coding skills.
- Portfolio building: Contributions can be showcased to employers.
- Networking: Collaborate with developers worldwide.

---

2. Steps to Contribute to Open Source

Here's a roadmap to start contributing:

Step 1: Choose a Project

- Pick a project related to your skills or interests (e.g., JavaScript, Python, Machine Learning, Web Dev).
- Explore platforms like GitHub, GitLab.
- Look for "good first issue" or "beginner-friendly" tags.

Step 2: Understand the Project

- Read the README.md for a project overview.

- Check CONTRIBUTING.md for contribution guidelines.
- Explore issues, pull requests, and documentation to understand the workflow.

Step 3: Fork the Repository

- Forking creates your own copy of the repository where you can make changes safely.
- Example: Click Fork on GitHub → Your copy appears in your account.

Step 4: Clone the Repository

- Download the forked repository to your local machine:

Step 5: Create a Branch

- Create a branch to work on your changes (never work directly on main/master):

```
git checkout -b my-feature
```

Step 6: Make Changes

- Fix bugs, add features, or improve documentation.
- Follow coding standards mentioned in CONTRIBUTING.md.

Step 7: Commit Changes

- Stage and commit your changes with a clear message:

```
git add .
git commit -m "Add feature X or fix bug Y"
```

Step 8: Push Changes

- Push your branch to your GitHub fork:

```
git push origin my-feature
```

Step 9: Create a Pull Request (PR)

- Go to the original repository → Click Compare & Pull Request.
- Explain your changes clearly → Submit the PR.

Step 10: Review & Feedback

- Project maintainers may request changes → Make updates and push again.
- Once approved, your PR will be merged into the main codebase.

VedWay-Daily Tracker-CLI #190

arya2004 merged 1 commit into `arya2004:main` from `VedWay:main` 3 days ago

Beginner-friendly Python project using only standard library (json, os, datetime).
Demonstrates CLI interaction, file handling, and basic data persistence.
🔍 Checklist:
Before submitting this PR, I have:

- [x] [Created a new folder in src/ using the format yourusername-projectname.
- [x] Added all necessary .py files for the project.
- [x] Included a README.md with project description and run instructions.
- [x] Included requirements.txt with a note about standard library only.
- [x] Tested the project locally and ensured it runs as expected.

📦 Project Details:

Language Used: Python 3
External Dependencies: None
How to Run:
python3 daily_tracker.py

🌟 Additional Notes (if any):
Example usage is included in README.md.
Beginner-friendly, easy to extend for adding new features like notifications, prioritization, or categories.

Added New Project Idea: Emergency Contact Auto-Notifier
Tier: Intermediate
Summary:
A mobile-first app that automatically notifies selected emergency contacts if the user fails to check in during specific activities like hiking alone, late-night work, or travel. Users can set check-in intervals, and the app sends location updates and status alerts when a check-in is missed.
User Stories:
• As a user, I can set a "check-in interval" for my activity.
• As a user, I can select emergency contacts who will receive notifications if I fail to check in.
• As a user, I can manually check in to indicate I am safe.
• As a user, the app automatically notifies my emergency contacts with my last known location if I miss a check-in.
• As a user, I can view the status of my last check-in (OK / delayed).

Open **Added new project idea: Emergency Contact Auto-Notifier** #1062

VedWay wants to merge 2 commits into `florinpop17:master` from `VedWay:add-emergency-co…`

Bonus Features:

- Preconfigured activity templates (hike, night work, travel) with recommended check-in intervals.
- Automatic emergency service call if contacts do not respond after X minutes.
- Integration with wearables (Apple Watch, Android Wear) to quickly check in or trigger an alert.
- Push notifications and SMS/email alerts to contacts.
- Location history and activity logs for safety review.

Useful Resources:

- Google Maps / OpenStreetMap APIs
- Twilio API for SMS notifications
- Firebase for real-time alerts
- React Native documentation
- Expo documentation (optional for rapid mobile prototyping)

Example Projects:

- Safety App Example
- Check-In Tracker

This idea is not currently listed in the app-ideas repository and fits the Intermediate tier.

Summary by CodeRabbit

- **Documentation**
  - Added a new Tier 2, mobile-first concept for an Emergency Contact Auto-Notifier. Includes description, user stories, configuration options (check-in interval), contact selection, manual check-ins, status views, bonus features, integrations, and helpful resources/examples.

Added new project idea: Emergency Contact Auto-Notifier c526239

coderabbitai bot commented 3 days ago • edited

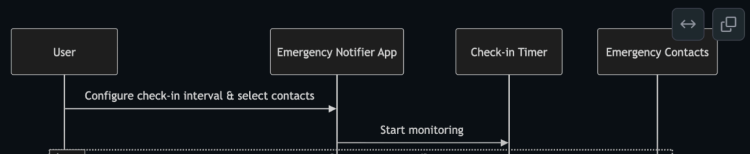
Walkthrough

A new Markdown document was added describing an Emergency Contact Auto-Notifier application (Tier 2, intermediate, mobile-first) that specifies user stories, configuration options for check-in intervals, contact selection, manual check-in, status views, bonus features, and useful resources.

Changes

Cohort / File(s)	Summary
Project Specification `Projects/2-Intermediate/EmergencyContactAutoNotifier.md`	Added a new specification file for a Tier 2 intermediate mobile-first Emergency Contact Auto-Notifier project, including description, user stories, configuration options (check-in interval), contact selection, manual check-in, status views, bonus features, resources, and example projects.

Sequence Diagram(s)



Open **Added new project idea: Emergency Contact Auto-Notifier** #1062
VedWay wants to merge 2 commits into `florinpop17:master` from `VedWay:add-emergency-co…`

Estimated code review effort

🎯 1 (Trivial) | ⏱ ~3 minutes

- Documentation-only addition; review focus: clarity, completeness, formatting.

Poem

> 🐰 I hop a quiet rhythm, watching the clock,
> If a check-in drifts silent, I gently knock,
> Contacts wake and messages fly,
> Safety sewn under twilight sky,
> A little rabbit keeps watch—soft, not sly.

Conclusion - Therefore in this lab we learnt how to contribute to an open source project. Open source is a powerful way to learn, collaborate, and contribute to software used by millions worldwide. Contributing not only improves your skills and portfolio but also fosters collaboration and innovation, making technology more accessible and transparent for everyone.
